Lecture 5

Concept videos

Hall of Fame or Shame?

forecast.io

Hall of Fame!

forecast.io.

Good

- uncluttered visual design
- key info large (current weather)
- simple understandable icons
- easy to scan week's weather
- optional details & animations

Bad

- “Precip Map” takes a lot of space
- advertising seems out of place

Outline

- ❑ Tasks
- ❑ Video Prototypes
- ❑ Concept Videos
- ❑ Making a Concept Video
- ❑ High-fidelity Video Examples

Task. The structured set of activities or high-level actions required to achieve a high level user goal.

what a user wants to do

Task-based Design & Evaluation

- ❑ Real tasks customers have faced / will face
 - collect any necessary materials
- ❑ Do your tasks support the problem you are solving?
- ❑ Mixture of simple & complex tasks
 - simple task (common or introductory)
 - moderate task
 - complex task (infrequent or for power customers)

What Should Tasks Look Like?

- ❑ Say what customer **wants to do**, but **not how**
 - allows comparing different design alternatives

Good (Task)

Tony is visiting London and wants to find the pub that his friend told him about. He is walking down the street using his phone to navigate to the place that he has previously looked up.

What Should Tasks Look Like?

- ❑ Say what customer **wants to do**, but **not how**
 - allows comparing different design alternatives

Bad (this is a ***Taskflow***)

Tony clicks on the Charing Cross Pub icon and selects “directions to” as he walks down the street.

What Should Tasks Look Like?

- ❑ Say what customer **wants to do**, but **not how**
 - allows comparing different design alternatives
- ❑ Be specific – stories **based on facts!**
 - say who customers are (use personas or profiles)
 - ❖ design can really differ depending on who
 - ❖ name names (allows getting more info later)
 - ❖ characteristics of customers (job, expertise, etc.)
 - forces us to fill out description w/ relevant details
- ❑ Some should describe a **complete goal**
 - forces us to consider how features work together
 - ❖ example: phone-in bank functions

Using Tasks in Design

- Write up a description of tasks
 - formally or informally
 - run by customers and rest of the design team
 - get more information where needed

Let my friends know where I am

Manny is in the city at a club that he wasn't planning to go to and would like to let his girlfriend, Sherry, know where he is and be notified when she is about to get to the club.

Using Tasks in Design (cont.)

❑ Rough out an interface design

- discard features that don't support your tasks
 - ❖ or add a real task that exercises that feature
- major screens & functions (not too detailed)
- hand sketched

❑ Produce task flows for each task

- what customer has to do & what they would see
- step-by-step performance of task
- illustrate using storyboards
 - ❖ sequences of sketches showing screens & transitions

Task Flows Show How to Do the Task

- ❑ Task Flows are *design specific*, tasks aren't
- ❑ Task Flows force us to
 - show how various features will work together
 - settle design arguments by seeing examples
- ❑ Show users taskflows to get feedback

What ←————→ **How**

Task ←————→ **Task
Flow**

Concept————→ **Video**
Video **Prototype**

Video Prototypes

- ❑ Illustrate how users will interact w/ system
- ❑ Unlike brainstorming, video prototyping contracts the design space
- ❑ Quick to build
- ❑ Inexpensive
- ❑ Forces designers to consider details of how users will react to the design
- ❑ May better illustrate context of use

Video Prototype Characteristics

Paper Prototypes, Existing Software or Projected Images as a background

Optional Narration, Conversation preferred
narrator explains events & others move images/illustrate interaction while actors perform movements – viewer expected to understand w/o voice-over

Usually fixed prototypes, but also used in open prototypes
e.g., live video & 2nd camera to capture

With **good storyboards**, a good short film can be shot in 1-2 hours

Video Prototype Examples

((Tuned))

movie 14

Video Concept

Concept + Vision Videos

How to capture an early
concept and tell a story

It's About Stories

movie 15

It's About Details

- The house behind & the driveway set the scene – upper middle class
- The VW logo is prominent
- The hands and helmet tell us what the boy is doing
- These are things the viewer might not notice, but are important to setting the scene

Key Pieces of Successful Concept Videos

People
(roles)

Context
(scene)

The Solution
(props)

- 1 Kid & his parents
- 2 He wants to use the force, but is failing at it (upper middle class – VW appropriate product)
- 3 Dad has a cool car that let's you remotely turn it on. The Force is alive!

Keep it Simple

Use what you **know** and what you **have**

Concept Video Examples

Cookable

Cooking Made Easy

movie 16

micro**health**

A little goes a long way

movie 17

SpeakEasy

Contextual language learning

movie 18

movie 19

- good use of existing footage!
- hard to read screen

SpringBoard

PERSONAL SUCCESS ENABLING SOCIAL GOOD

JULIA ENTHOVEN, GRIFFIN KOONTZ, CLEMENTINE JACOBY, TEJAS SHAH

movie 20

- Good use of existing footage
- Good use of props (he isn't fat!)
- Great use of cards
- Video image quality not so great

The Goal of any good
conceptual film...

Someone should be able to understand your project simply by watching your film

movie 21

- You've probably seen the Google Glass film (before the product even came out).
- The system didn't really work yet and this movie gave you an idea of what they were trying to achieve.

Making a Concept Video

What is the **message** of the film?
What is the **value proposition** you offer?
Can you describe it in a few lines?

Make a basic **plot**

Discuss plot ideas until you get a few that really make sense,
decide characters

Storyboard

Turn these into multiple storyboards of scenes to plan how you will film it

* note: **not** UI storyboards!

1 2
3 4

Storyboarding

Use sticky notes so scenes can be moved

Include lines to be spoken if necessary

Use appropriate angles

1	2
3	4

Storyboarding

Storyboarding

SCENE 4

Words On Screen: Investigate

Voiceover: The mitochondria are the powerhouse of the cell

SHOT 1

beautiful flower, child's eyes are wide looking at it head is cocked to the side, inquisitive

SHOT 2

tablet pans into view, image on screen shows the cellular structure of the plant

Storyboarding:
Draw pictures,
label the kind of
shot you might
have and what the
actor should do.
Show scenes,
characters,
camera angles &
zoom (dialog)

Shoot your Film

Get as many shots (angles, close ups, distance...) as you can! you never know what might be useful later.

If you choose to use music

Now is a good time to pick some songs. Music can be very powerful if chosen well. (see Vimeo for music you can use free)

Edit your Film

Use your storyboard! This part should be simple if you have storyboarded correctly.

Lighting

Basic 3 Point Lighting Setup

Avoid Clutter

movie 22

People

Use Close-Up shots

Capture emotion

Avoid conversation
(This is the hardest to get right
and ends up distracting)

Use the right person
for the role-ask friends

A woman with blonde hair, wearing a dark jacket and black pants, is walking on a paved path at night. A small drone with red and white lights is flying in the air above her. The background shows trees and distant city lights.

**Plan your story –
Storyboard it.**

Is the story believable?

◆ Film multiple angles

Film longer than the
shot needs (you can
always cut down)

Context

The Solution

Wow Effect

Show your solution at it's best, save the best for last

Subtlety

Show how the solution makes the user feel – subtly

Don't 'Sell' it

Don't tell people to use your solution, show them why

ChoreoLab (example project)

movie 29

High Fidelity Concept Videos

movie 30

Summary

- ❑ Video prototypes allow us to quickly communicate how a user will use a design
- ❑ Concept videos set up more of the story of use
- ❑ Both techniques are useful
 - your projects are at the concept video stage
